

What is an eSigning Ceremony?

An eSigning ceremony is more than applying your signature or clicking "I ACCEPT" in a document.

An eSigning ceremony enables you to design the signing process from beginning to end.

- Select the documents to be reviewed and signed
- Establish the correct document presentation order
- Authenticate the signers
- Capture intent
- Bind signers to documents
- Produce an audit trail with validated time-stamps for each action

A well executed eSigning ceremony is irrefutable!

Applications

IntegriSign Emcee benefits any process that requires a signature or approval, including:

- Online account opening:
 - Consumer Deposits
 - Consumer Credit
 - Automotive Loan
 - Automotive Insurance
- Contracting
- Home and Life Insurance
- Securities
- Mortgages
- Human Resources
- And many more!

Be the Master of Ceremonies: IntegriSign Emcee™

Interlink Electronics now adds IntegriSign Emcee™ to its robust eSign Anywhere™ platform. By addressing the critical demand to capture intent as well as the signature, IntegriSign Emcee ushers in the next generation of eSigning server technology. Through intuitive and secure online processes, IntegriSign Emcee enables both your brick and click channels to achieve operational excellence.

IntegriSign Emcee Designer, Presenter, Verifier

By utilizing the intuitive Designer interface, you choose the documents to include in the signing process. Once you have selected the required documents, you establish the presentation for the correct signing order and then check the status through the Verifier. Your customers can also check on their application status through the Verifier without having to call or email. IntegriSign Emcee puts the power of designing, presenting and managing the online process into the hands of those who need it most.

Distributed eSigning Engine

IntegriSign Emcee provides scalable security and authentication options through its Distributed eSigning Engine. IntegriSign Emcee will cryptographically sign a document at the server or provide digital signing capability at the desktop or on a mobile device. Organizations now have a choice of how they deploy a browser based signing architecture—optimizing the association of the signing process with the actual signer.

Standard eSignatures

IntegriSign Emcee leverages the freedom offered by Adobe® Systems adoption of digital signatures in PDF documents. No proprietary tools are necessary to verify the eSignature. Anyone, you and your customers, can verify the validity of signatures produced by simply using Acrobat® or Adobe Reader®.

On the Go

IntegriSign Emcee recognizes that each signing process is unique; some transactions require additional security and authentication. Compatible with Interlink's ePad Family of signing devices, click-to-sign capability of your standard browser or even your Windows Mobile® touch-screen smartphone, IntegriSign Emcee gives your customers and field representatives the power to eSign anywhere.

eSign Anywhere™.

Operational Excellence through the eSign Anywhere™ Platform

Business Value

Capture business and client assets quickly!

With IntegriSign Emcee, your workforce focuses on generating business versus time intensive paper management tasks. This leads to cross-selling opportunities and decreased attrition rates.

IntegriSign Emcee also lowers paper-related expenditures and reduces Not In Good Order (NIGO) rates. With straight-through processes in place, your organization adds cost saving benefits to your increased revenue opportunities.
